                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Data from AC079810 and AC073128 was used to finish this clone, AC009974. Polymorphisms have been identified between AC073128 AC009974. A single plasmid region exists between 38812-38903. unresolved tandem in the HERV SVA exists between 184390-185163. PCR suggests that approximately 1700 bps are missing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              donor, as described by Oscegawa, K. Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An Improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://www.cancer.med.buffale.edu)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (http://bacpac.med.buffalo.edu)

NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mus musculus chromosome 1 clone PAC510; PAC457, *** PROGRESS ***, 3 unordered pieces.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      is useful in determining a risk estimate of a metabolic disease, such as diabetes or obesity, in a subject. The variation may occur in exons 3, 4 or 10. In exon 3 variation may be a substitution of a G for a C at nucleotide 320, resulting in the amino acid substitution P71A; in exon 4 variation may be a substitution of a T for a C at nucleotide 550; and in exon 10 variation may be a substitution of a T for a C at nucleotide 1037, resulting in the amino acid substitution R340w. There may also be nucleotide variation
              variation

Detecting the presence of the PRKAG3 DNA, or a variant, is useful in determining a risk estimate of a metabolic disease, such as diabetes or obesity, in a subject. The variation may occur in exons 3, 4 or 10. In exon 3 variation may be a substitution of a G for a C at nucleotide 320, resulting in the amino acid substitution P71A; in exon 4 variation may be a substitution of a T for a C at nucleotide 550; and in exon 10 variation may be a substitution of a T for a C at nucleotide 1037, resulting in the amino acid substitution R71A; in exon 4 variation may be a substitution of a T for a C at nucleotide 1037, resulting in the amino acid substitution R71A; in exon 4 variation be a substitution of a T for a C at nucleotide 1037, resulting in the amino acid substitution R71A; in the may also be variations is based on the full length cDNA as given, rather than on position 1 of the open reading frame.
        Human AMPK gamma subunit muscle-specific isoform, PRKAG3 cDNA

                                                                                                                                                   useful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of pRKAG3. Transgenic animal and host cell transformed with PRKAG3 or a heterotrimeric AMPK consisting of pRKAG3 or its mutant, are useful for screening compounds able to modulate AMPK activity. Nucleic acid encoding pRKAG3 is useful for detecting mutations in a Prkag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain of pRKAG3 and is useful in gene therapy.
                                                                                                                                                                                                                                                                          evaluation, genetic testing and prognosis of a metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRKAG3, are
                                                                                                                                                                                                                                                                                                                      useful as therapeutic for treating carbohydrate metabolism disorders as diabetes, obesity, and disorders associated with muscle metabolism such as myopathy and cardiovascular diseases, to modulate AMPK activity, and for restoring a normal AMPK function. PRKAG3 sequence and its functionally altered mutants are useful for the diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a cDNA encoding human adenosine monophosphate (AMP)-activated kinase (AMPK) gamma subunit muscle-specific isoform, PRKAG3. Mutation in prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is
                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New variants of the gamma subunit of vertebrate adenosine monophosphate-activated kinase for diagnosis or treatment of associated with energy metabolism such as diabetes, obesity,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 12;

á

able to modulate AMPK activity

```
CC (AMP) activated kinase (AMPK) gamma subunit muscle-specific isoform, CC complete PRKAG3. Mutation in Prkag3 results in an altered regulation of CC carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is CC useful as therapeutic for treating carbohydrate metabolism disorders such CC as diabetes, obesity, and disorders associated with muscle metabolism Such as myopathy and cardiovascular diseases, to modulate AMPK CC activity, and for restoring a normal AMPK function. PRKAG3 sequence CC and its functionally altered mutants are useful for the diagnostic CC evaluation, genetic testing and prognosis of a metabolic disorder, CC preferably a carbohydrate metabolism disorder. Primers that can detect CC a genetic polymorphic marker linked to a sequence encoding PRKAG3, are CC useful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of PRKAG3 or a functionally altered allele of PRKAG3 or a sequence consisting of PRKAG3 or its mutant, are useful for arreaning common abla to modulate a make activity without and and host cell transformed with PRKAG3 or a sequence consisting of PRKAG3 or its mutant, are useful for arreaning cannot abla to modulate a make activity without and activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAD03320

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is a cDNA encoding pig adenosine monophosphate CC (AMP)-activated kinase (AMPK) gamma subunit muscle-specific isoform, cc complete PRKAG3. Prkag3 gene is located in the RN locus of chromosome CC 15. Mutation in Prkag3 results in an altered regulation of carbohydrate CC metabolism, particularly in skeletal muscle. PRKAG3 is useful as therepoutic for treating carbohydrate metabolism disorders such as cC diabetes, obesity, and disorders associated with muscle metabolism CC such as myopathy and cardiovascular diseases, to modulate AMPK CC activity, and for restoring a normal AMPK function. PRKAG3 sequence CC and its functionally altered mutants are useful for the diagnostic calluation, genetic testing and prognosis of a metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRKAG3, are cuseful for detecting a dysfunction of carbohydrate metabolism resulting C from the expression of a functionally altered allele of PRKAG3, are consisting of prkAG3 or altered to a sequence encoding the first cystathione beta synthase (CBS) domain cc in a sequence encoding the first cystathione beta synthase (CBS) domain cc presents and is useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

CC kinase (AMPK) gamma subunit muscle-specific isoform, PRKAG3 splice (C variant DNA. Prkag3 gene is located in the RN locus of chromosome 15. CC Mutation in Prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is useful as CC diabetes, obesity, and disorders associated with muscle metabolism CC such as myopathy and cardiovascular diseases, to modulate AMPK CC activity, and for restoring a normal AMPK function. PRKAG3 sequence CC and its functionally altered mutants are useful for the diagnostic CC evaluation, genetic testing and prognosis of a metabolic disorder, CC preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRKAG3, are CC useful for detecting a dysfunction of carbohydrate metabolism resulting CC from the expression of a functionally altered allele of PRKAG3. CC Transgenic animal and host cell transformed with PRKAG3 or a tereoring compounds able to modulate AMPK activity. Nucleic acid concoding PRKAG3 is useful for detecting mutations in a Prkag3 gene, or of parkag3 are sequence encoding the first cystathione beta synthase (CBS) domain

                                                                                      Ş
                                                                                                                                                                                         밁
                                                                                                                                                                                                        The invention relates to antisense inhibitors of genes essential to CC prokaryotic cellular proliferation, their use in identifying the GC genes, their use in the discovery of novel antibiotics, the essential CC genes themselves and the encoded proteins. The prokaryotes used are CC escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella CC pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The CC invention is also useful for the identification of potential new targets CC for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, CC and to obtain antibodies capable of binding to the expressed proteins. CC The proteins can be used to screen compounds in rational drug discovery CC programmes. The antisense nucleic acid sequence is also useful to screen CC a wide variety of organisms. The present sequence encodes an CC casential prokaryotic cellular proliferation protein.

CC Note: The sequence data for this patent did not form part CC of the printed specification, but was obtained in electronic CC format directly from WIPO at CC format directly from WIPO at

                                                                                                                                                   The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II) the polynucleotides are also used in diagnostics as expressed sequence tags of for identifying expressed genes. (I) is useful in gene therapy techniques (CI). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as food supplement. (II) and its binding partners are useful in medical (II) adjunctions of sites expressing (II). (I) and (II) are useful for treating considered involving aberrant protein expression or biological activity. The polypeptide and polypucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO cx at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT

                                                                                                                                                                                         cc polyniclectifes are also used in diagnostics as expressed sequence tags cf for identifying expressed genes. (I) is useful in gene therapy techniques ct to restore normal activity of (II) or to treat disease states involving cc (II). (II) is useful for generating antibodies against it, detecting or cc a food supplement. (II) and its binding partners are useful in medical cc imaging of sites expressing (II). (II) and (II) are useful for treating cc disorders involving aberrant protein expression or biological activity. Cc diagnostics, forensics, gene mapping, identification of mutations cc responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and cd sequences. AAS64197-AAS94564 represent novel human cc specification, but was obtained in electronic format directly from WIPO car fire wire intended and references of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT

The invention relates to isolated polynucleotide (I) and CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC consistency of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC diagnostics, forensics, gene mapping, identification of mutations in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches 54; Conser
                                                                                                                                                                                                                                                   useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of discoticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLG177-ABB72072) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                       Sequence 1406
                                                                                                                                                                                                                        The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1; SEQ ID NO 9988; 21pp + Sequence Listing;

                                                                                                                                 ABL19502 standard;
                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaccutical drugs. The invention discloses genomic DNA sequences (ABL018176-ABL30511), expressed DNA sequences (ABL018140, ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                    The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                        Sequence 3406
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 1; SEQ ID NO 9985; 21pp + Sequence Listing; English.

                                                                       3377
                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLG1840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                            Sequence 3593 BP;
                                                                                                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
